MINI AGENTIC LAB · LITE

Sample review

A real weekly review on the Fernhill demo

By **T.ŬR** · thisistur.com · Version 1.0, November 2026 · MIT licence

> **Sample output.** A real run of the Lite edition on 10 November 2026, model claude-sonnet-5-5, in a Claude Project with the two skills and the demo files. In the demo, T.ŬR is the marketing lead and Fernhill Outdoor is its fictional client: the brand and every figure are invented. Your run will differ in wording and in some verdicts. Judge the reasoning, not the label.

Fernhill weekly review: weeks 14 Sep to 2 Nov 2026 (data to 8 Nov)

Headline

The podcast looks like the most undervalued channel, and women's sizing is quietly costing us. The platform credits the podcast with about 1% of new customers. Customers put it at about 18%, and it stopped on 11 October. Re-run it as a measured test, and fix the fit guidance for women's 8 to 10.

Scorecard (store figures, so highest-trust)

Measure	Target	8-week actual	Latest week (2 Nov)	Result
MER	3.0 or more	about 3.10	about 2.97	Met overall, slipping
New customer cost	AUD 90 or less	about AUD 101	about AUD 104	Missed
Payback (estimate)	Margin plus 60-day repeat covers the cost	about AUD 92 per customer against AUD 101	n/a	Probably missed by about AUD 9

- Total spend was about AUD 139,200. Store revenue was AUD 431,300 from 1,372 new customers.
- The payback figure is rough. It assumes AUD 118 AOV, 62% margin, and a repeat order the same size. It uses a weighted 60-day repeat rate of about 25% from the survey.
- Hitting AUD 90 would have taken about 175 more new customers over the eight weeks, or about 22 a week.

Since last review (R-1, 2 Nov)

- **Meta creative (R-1 rec 1):** T-1 is planned for 9 to 23 Nov. Whether new creative is live is not in the evidence, so this is open. Please confirm. Meta prospecting kept falling: platform return went from 2.2 in week one to 1.5 now.

- **Brand search and retargeting (R-1 rec 2):** Still stands. Spend is flat.
- **Podcast question:** Answered, with Medium confidence. See the table below.
- **TikTok zero-order week:** Cause confirmed in the notes. A site tag update dropped the pixel event from 12 to 14 Oct.
- **T-1:** It cannot be judged yet. No full test week is in the evidence.

Data quality

- **Over-claim:** Platforms claimed AUD 589,800 against the store's AUD 431,300. That is about 1.37 times on revenue, and about 1.58 times on new customers (2,164 claimed against 1,372). Scaled figures below are estimates.
- **TikTok 12 Oct:** I excluded that week from TikTok's return. Other channels look normal that week.
- **Email, 12 Oct:** Impressions and clicks are identical to the week before. This may be a copied row. It is small spend and does not change a decision.
- **Performance Max:** Blended brand and non-brand. Its return is not a clean read.
- **Launch decay:** Every campaign started on 14 Sep, so some falling trends are launch fade.
- **Survey:** 412 of 1,372 answered (30%). Phone buyers answered less. Single choice only. YouTube (26) and Magazine (22) are directional only.

Channel scorecard (scaled estimates)

Channel	Spend (share)	Reported return, scaled	Cost per new customer, scaled	Trend	Verdict
Meta prospecting	AUD 44,400 (32%)	1.87, about 1.36	about AUD 125	Falling	Test (T-1)
Meta retargeting	AUD 14,900 (11%)	7.6, about 5.6	n/a (capture)	Flat	Protect
Google brand	AUD 8,400 (6%)	14.1, about 10.3	n/a (capture)	Flat	Protect
Google non-brand	AUD 21,800 (16%)	2.6, about 1.9	about AUD 103	Flat	Test
Performance Max	AUD 25,200 (18%)	3.98, about 2.9	about AUD 94	Falling	Fix
TikTok creators	AUD 15,800 (11%)	about 0.92, about 0.67	about AUD 236	Flat	Test
Email	AUD 2,800 (2%)	37, about 27	n/a (capture)	Flat	Protect
Podcast (ended 11 Oct)	AUD 6,100 (4%)	0.43, about 0.31	see below	n/a	Test

TikTok figures exclude the broken week.

Where the evidence agrees and disagrees

Channel	Platform share of new customers	Customer-reported source	Gap
Podcast	about 1%	about 18%	Platform far too low
TikTok	about 4%	about 13%	Platform too low
Meta (both)	about 33%	about 13% (Instagram or Facebook)	Platform too high
Google (all)	about 50%	about 11%	Platform far too high
Friend or family	0%	about 24%	No channel, but the biggest source
Email	about 12%	not an option in the survey	Collects, does not create

- **Podcast.** The platform sees only promo-code orders. The survey, 31 reviews, and 27 FERN15 tickets all point the other way. Podcast customers are also the best: AUD 129 first order and 34% repeat. Survey-implied, that is roughly 250 new customers, or about AUD 25 each. Even at half that, it would be about AUD 50. This is an estimate with survey bias. I lean on the survey and tickets over the platform.
- **TikTok.** Last-click return looks poor. But 18 reviews say "saw it on TikTok, then searched". Its customers are the weakest: AUD 98 first order and 14% repeat. That is a Test, not a Cut, because the two sources conflict.
- **Meta and Google.** The platforms take credit for demand that word of mouth and the podcast likely created.

Recommendations

1. **Re-run the podcast as a four-week test at about AUD 1,170 a week, with a new promo code and a vanity URL.** - **Why:** It is about 18% of survey answers, with the highest order value and repeat rate. The 20% cap on shifts lets you take about AUD 600 from Performance Max and about AUD 550 from non-brand. - **Proposed T-2:**
    - Main metric: weekly store new customers.
    - Success: an average of 175 or more over the four weeks. The 12 Oct to 2 Nov average was 165.
    - Stop: below 165 after two weeks.
    - Check: podcast share in the survey.
    - **Caveat:** T-1 overlaps. Read both with that in mind.
    - **Confidence:** Medium.
    - **What would change my mind:** A new-code and survey count far below about 25 a week.
    - **Cost of being wrong:** Medium, about AUD 4,700 over four weeks.
2. **Add a size and fit guide for women's 8 to 10 and narrow shoulders, on the product page and in the ads.** - **Why:** There were 58 sizing tickets and 38 reviews on it. The returns rate is 14%, and about 61% of returns cite size. That is roughly 8.5% of orders, or about 39 a week (estimate). -

Confidence: Medium. - **What would change my mind:** Store data showing size returns spread across all sizes. - **Cost of being wrong:** Low.

3. **Check the new Meta creative leads on warmth and drops or qualifies "ultralight". Judge T-1 on store new customers as well as platform cost.** - **Why:** 71 reviews praise warmth, and 26 say it is heavier than the ads suggest. Platform cost per new customer is AUD 94.6. T-1's AUD 80 target is a platform figure, and scaled it is nearer AUD 150 now. - **Confidence:** Medium. - **What would change my mind:** A platform win with no store lift would mean the claim is over-credited. - **Cost of being wrong:** Low.
4. **Get a brand and non-brand split for Performance Max, via brand exclusions or a search-category report.** - **Why:** It is 18% of spend. Return fell from 4.3 to 3.6 while spend rose about 10%. Orders were 88 in the latest week, its lowest. - **Confidence:** Low to Medium. - **What would change my mind:** A split showing it is mostly non-brand and converting. - **Cost of being wrong:** Low.
5. **Hold brand search, retargeting, email, and TikTok at current spend.** - **Why:** The first three mostly capture demand (L-2). TikTok's 0.67 return is last-click only, and survey and reviews conflict with it. - **Confidence:** High for the capture channels, Low for TikTok. - **What would change my mind:** A holdout test showing TikTok adds nothing. Run it after T-1 and T-2, not alongside them. - **Cost of being wrong:** Low.

What we cannot tell yet

- Whether new Meta creative is live, and whether it works.
- How much of the post-11 October dip in new customers is the podcast ending, Meta fade, or launch decay. New customers fell from about 178 a week to about 165.
- Real repeat value by source. The survey is self-reported, and it covers 30% of customers.
- Why friend and family is the biggest source. Nothing in our spend feeds it directly. A referral test could come later.

Save to the brain

Review log (top):

```
### R-2 | 2026-11-10 | Weeks starting 2026-09-14 to 2026-11-02

**Headline:** The podcast looks undervalued: the platform credits it with about 1% of new customers, customers say about 18%, and it ended 11 Oct. Re-run it as a measured test and fix women's 8 to 10 sizing.

| Measure | Target | Actual | Result |
| --- | --- | --- | --- |
| MER | 3.0 or more | about 3.10 (latest week about 2.97) | met, slipping |
| New customer cost | AUD 90 or less | about AUD 101 (latest week about AUD 104) | missed |
| Payback (estimate) | margin plus 60-day repeat covers cost | about AUD 92 against AUD 101 | probably missed |

**Verdicts**
- Meta prospecting: Test (T-1). Platform return 2.2 to 1.5.
- Meta retargeting, Google brand, Email: Protect.
- Google non-brand: Test.
- Performance Max: Fix. Needs a brand and non-brand split.
- TikTok: Test. Last-click scaled return about 0.67, but survey about 13% and reviews conflict.
- Podcast: Test. Platform about 1% against survey about 18%.

**Recommendations**
1. Re-run the podcast as a four-week test (proposed T-2, not yet agreed). Medium.
2. Add a women's 8 to 10 and narrow-shoulder fit guide. Medium.
3. Check the new Meta creative leads on warmth and qualifies "ultralight". Judge T-1 on store new customers too. Medium.
4. Get a brand and non-brand split for Performance Max. Low to Medium.
5. Hold capture channels and TikTok at current spend. High for capture, Low for TikTok.

**Data quality**
- Platforms over-claim about 1.37 times on revenue and about 1.58 times on new customers.
- TikTok pixel missing 12 to 14 Oct (site tag update). Week excluded.
- Email 12 Oct row may be duplicated.
- Performance Max is blended.
- Survey: 30% response. YouTube and Magazine groups are under 30.

**Open questions**
- Is new Meta creative live?
- How much of the post-11 Oct dip in new customers is the podcast ending?
- Is the lead happy to start T-2?
```

Learnings (top of section):

```
- **L-6** (2026-11-10, Medium, messaging, meta, creative) Customers praise warmth (71 reviews) but 26 say the jacket is heavier than the "ultralight" ads suggest. [source: R-2, reviews]
- **L-5** (2026-11-10, Medium, sizing, returns) Returns run at 14%, and about 61% cite size, mostly women's 8 to 10 and narrow shoulders. [source: R-2, support tickets]
- **L-4** (2026-11-10, Medium, podcast, attribution) The podcast drives far more new customers than the platform shows: about 18% of survey answers against about 1% of platform-claimed, with the highest first order (AUD 129) and repeat rate (34%). [source: R-2, survey]
```

No test is saved. T-2 is only proposed and waits for your yes.
